

# Jose Pablo Feng

**Address:** San Jose, Costa Rica

**Cell:** (+506) 6064-0899

**Email:** [joseph.feng1@gmail.com](mailto:joseph.feng1@gmail.com)

**LinkedIn:** <https://www.linkedin.com/in/josepablofeng>

**GitHub:** <https://github.com/JPF3N998>

## Professional Experience

- **Gorilla Logic Intern - Frontend Engineer** *Feb 2021 - Jul 2021*
- **Gorilla Logic Full-time - Frontend Engineer** *Jul 2021 - March 2023*
  - Improved client's Identity Management capabilities in the administrators' UI view, attracting more prospects, clients, and partnerships by implementing new features and maintaining implemented ones using Vue.js 2.
  - Executed as **frontend feature lead** on an Epic to develop an integration with Personio; helping client and Personio promote a joint service package during a campaign for the EU target market by: syncing dev team with product's requirements, goals, and objectives. Plan and design the required **Jira** issues to work on.
  - Pioneered **internal tools** to help team with day to day tasks
    - **Took initiative** of creating a Confluence page that gave a summarized and compact view of research done on potential third-party service provider APIs to check whether client's product current capabilities allows for an integration with them with the objective of increasing integrations catalog and attract potential prospects and clients. The visibility and use of the document extended from: my team members up to the Sales team and Product team higher-ups.
    - As part of the team's responsibility, we had to document our supported integrations with third-party service providers in a Confluence page linking to directories of a GitHub repo. Manually updating is not scalable. I went ahead and created a Go program that tapped into GitHub's API, extracted each directory's link, and flushed them out into a markdown file to copy-paste into the Confluence page.
    - **Implemented a Daily Stand-Up facilitator tool:** Made a Python script to generate a list of team member names. Added the list of names to a Google Spreadsheet, created a Slack Workflow to read and send a scheduled message to print the designated facilitator for that work day.

## Education

- **Costa Rica Institute of Technology** - Cartago, Costa Rica *Feb 2017 - Sept 2021*
  - BSc. Computing Engineering

## Skills

- JavaScript
- HTML
- CSS

- Vue.js
- Unit testing: Jest and Vue Test Utils

## Interests and Additional Information

- Native spanish speaker
- Fluent in English
- Acquainted with Agile Methodologies, specifically Scrum. Have facilitated each ceremony at least one since being an intern
- Interests: Music, Games, Pixel Art, cool-looking GUIs
